1. Backup and remove old CDN module.

2. Backup your WHMCS database.

3. Read OnApp WHMCS CDN Module Guide and install CDN Module.

4. Create new server with type "OnappCDN".

5. Create new product(s) with exactly the same name as the old product(s) one.

6. Make sure that "Configurable options" are properly linked to the product (must be one group per product).

7. Upload migrateCDN.php to the WHMCS root directory.

8. Run the migration tool via console:

    *php /path/to/migrateCDN.php*

9. Check if users have been migrated correctly.

10. Delete/disable old product(s) and server.

11. To get billing and statistics functionality install and configure Billing Module.
